

**MEDICAL DEVICES WITH MAGNETIC  
RESONANCE VISIBILITY ENHANCING MATERIAL**

ABSTRACT OF THE DISCLOSURE

5 The present invention relates to an  
elongated medical device for intraluminal  
manipulation during a process of magnetic resonance  
imaging. The device includes an elongated body. An  
extrusion material is integrated with the elongated  
body and includes a hydrophilic polymer that  
10 incorporates a substance having a plurality of  
paramagnetic ions. The extrusion material is  
configured to enhance magnetic resonance visibility  
during said process of magnetic resonance imaging.
